Backup Fiber Internet Connection					
Purpose: To ensure that its e-services remain online for both campuses, AAUP requires a backup internet connection that will act as a redundant link, providing uninterrupted internet service in the event of primary link failure. The connection must offer symmetric bandwidth with a 1:1 contention ratio.					
Technical specifications:					
1.Connection Type:					
Fiber Optic: The connection must be delivered via fiber optic technology.					
2.Bandwidth :					
Symmetric Bandwidth (Download/Upload): 1 Gbps, ensuring equal download and upload speeds.					
3.Contention Ratio:					
1:1 Contention Ratio: The connection must always provide a dedicated bandwidth with no sharing between other users (guaranteed bandwidth).					
4.Redundancy:					
Physical Path Diversity: The backup link should be delivered through a different physical route from the primary connection to minimize the risk of simultaneous failures.					
5.Service Level Agreement (SLA):					
- Uptime Guarantee: A minimum of 99.9% uptime.					
- Latency: Maximum acceptable latency (<10 ms).					
- Packet Loss: Maximum acceptable packet loss (< 0.1%).					
6.Technical Support:					
24/7 Technical Support: The provider must offer 24/7 support with a maximum response time.					
7.Installation and Setup:					
- Installation Timeframe: 15 days of contract signing					
- Hardware Requirements: Any required hardware (e.g., ODFs, switches, routers) should be included in the proposal or specified separately.					
8.Monitoring and Reporting:					
Real-time Monitoring: The provider should offer real-time monitoring of the link.					
oReporting: Monthly performance reports on the connection should be provided, including metrics on uptime, latency, and packet loss.
